I can fully stream video from Felton to the cell tower!! Without disconnecting!

Also can stream and call out virtually everywhere from Alba rd to Felton (along Alba rd, Empire grade rd and Felton Empire rd.)

with only one area in the CTI cell coverage gap that I didn't successfully make a clear phone call. But this low cell coverage spot is only about a football field length of road near Patrick rd. That's all!

Today we have cell coverage, without any CTI tower! Cell coverage has improved from all their data. Their data has always been wrong, but especially true today as cell coverage has significantly improved as now I can also stream video, not only make calls along Empire grade Felton to Ben Lomond!

The videos and my Affidavit are with Tim Richard's as the videos are too large for me to email them myself.

Leif Moller

DECLARATION OF LEIF ERIK MOLLER

I, LEIF MOLLER, declares as follows:

1. I lived at 714 Summit Drive for about 8 years before my home was burned down in the CZU fire. I am in the process of rebuilding.
2. I have attached real-time Google maps, GPS and real-time cell-bar status showing cell phone coverage using my partner Rachel Moller's iPhone 14, which has exclusively AT&T service. It was executed on June 3, 2025, and shows real-time streaming video and real-time phone coverage.
3. I have attached real-time Google maps, GPS and real-time cell-bar status showing cell phone coverage using Rachel Moller's iPhone 14, which has exclusively AT&T service. It Streamed live video the entire streaming drive test started from my address (714 Summit Dr.) to Felton then we turned around and went back up the hill to 186 Upper Summit Dr (the site of CTI's proposed cell tower). I conducted this test on June 3, 2025, and shows real-time live video streaming, and real-time phone AT&T cell coverage. The cell video streaming test never disconnected or dropped and paused only four times total but always regained video streaming shortly after pausing. Only once did it pause in the purported cell coverage gap area shown in the AT&T propagation maps submitted.
4. The other test we did was a phone call test starting from my home at 714 Summit Dr. and heading down the hill of Empire Grade. The call dropped just before Pine Flat Rd. meets Empire Grade Rd. The test shows I had 5G service past Conifer Lane, which my understanding is the point past which AT&T propagation maps show that the proposed CTI tower would no longer provide coverage.
5. In my opinion, these results show that the CTI and AT&T tower would not significantly improve cell phone coverage in our area and is unnecessary to provide cell phone and streaming coverage.

Executed on June 4, 2025, at Santa Cruz, California. I declare under penalty of perjury under the laws of California that the foregoing is true and correct.

Ss/ Leif Erik Moller
