

## Lab test results

Private lab tests show frequent pesticide contamination in cannabis, as well as the presence of synthetic THC and harmful dilution oils ●. Most products listed are vapes bought on the legal market. Pre-rolls, edibles and products bought outside legal venues are noted. Findings are based on California residue limits, including zero-tolerance chemicals. Where no state limit exists (off-list), the U.S. Environmental Protection Agency threshold for evaluating pesticides on tobacco is used. **For more detail about a product, click the finding icon.**

### Finding

Exceeded California limit

Pesticides detected
